

Corrigendum Test 8

No changes in today's paper

In Q.21 there was a doubt in 3rd statement regarding implementation of India's first Green Energy convergence project- Under the project, agricultural pumps will be distributed to farmers.

It is a correct statement.

Explanation: Under the project, EESL will replace around 6300 agricultural pumps with more energy efficient pumps (energy efficient agricultural pumps will be provided). This would help farmers as it would reduce the overall power consumption. Thus, energy efficient agricultural pumps will be provided under the project.

Test 7

In Q.46 some students were confused as to **what is the primary reason behind Earth's radius being larger at the Equator than at the poles.**

Explanation: The question asks the **primary reason** behind equatorial bulge (Earth's radius larger at the Equator than at the poles). The primary reason is the long-term effects of the Earth's rotation. There might be other reasons as well. Pull of gravity being higher in poles is due to equatorial bulge. It is not the primary reason behind the Equatorial bulge.
