

Heat Therapy

Heat therapy uses warmth to relax muscles, reduce stiffness, and relieve pain. By improving blood circulation, it helps deliver oxygen and nutrients to the tissues, accelerates healing, and promotes overall relaxation. This therapy can be applied in various ways, including hot stone massage, heated Himalayan salt stones, and heated bamboo massage, making it a versatile and effective method to support physical well-being.

Natural Hot Stones

Natural Hot Stones provide deep heat penetration that relaxes muscles thoroughly. Their natural texture gives a soothing, close-to-nature feel, and they are eco-friendly since they are minimally processed.

Heated Bamboo Massage

Heated Bamboo Massage is an ancient Asian technique that uses warm bamboo sticks to gently knead and roll over the muscles. It helps relieve tension, improve blood circulation, and promote deep relaxation. The natural heat from the bamboo enhances the massage effect, supporting flexibility, easing stiffness, and balancing energy throughout the body.

Himalayan Salt Stones

Himalayan salt stones are made from natural pink salt mined from the Himalayan mountains. Traditionally, they have been used in wellness practices for centuries, especially in Asia, for their calming and healing properties. When heated, these stones help relax muscles, improve blood circulation, reduce tension, and promote detoxification. They are also believed to release negative ions that can enhance mood and overall well-being.

Stone Heater

A stone heater warms massage stones to the ideal temperature for therapy, ensuring consistent heat during the massage session. It enhances the effectiveness of hot stone therapy by helping muscles relax deeply, improving blood circulation, and promoting overall relaxation. Using a stone heater also ensures safety by maintaining a controlled temperature, preventing stones from becoming too hot and causing discomfort or burns.
